DANIEL HAF

The Generated Image: Forging a Career in Computer Graphics

Computer graphics programmers are the magicians that make media possible. Computer Graphics expertise opens up a wide range of exhilarating career options. These range from (but are not limited to) designing interactive 3D websites for celebrities, working on indie or AAA Games, working in the film and entertainment industries. With the emergence of technologies like mixed reality, computer graphics now plays an integral role in helping to build spatial worlds and interactions.

Come join Jasmine Roberts to discuss how to leverage computer graphics knowledge to enter the art, gaming and AR/VR industries. Jasmine will show a wide array of relevant projects from Google, NASA, Unity and personal projects.
